SATYAM KUMAR

Greater Noida (Delhi NCR), India | +91-7061559039 | satyamkumariitmgu@gmail.com | github.com/Satya0810 | linkedin.com/in/satyam-kumar-738465338 | leetcode.com/u/SatyamKumar108

PROFESSIONAL SUMMARY

High-performing **Software Engineer (2027 Batch)** with hands-on expertise building **AI-first, cloud-native, and data-driven systems**. Proficient in **Python, Java, and modern application development** with demonstrated success orchestrating Multi-LLM speculative inference pipelines, cloud integrations (AWS S3 SDK, Supabase PostgreSQL, Firebase, RESTful microservices), and real-time streaming engines. Strong foundation in Computer Science fundamentals: **Data Structures & Algorithms (200+ LeetCode problems solved)**, OOP, DBMS (Oracle SQL certified), and SDLC/Agile. Proven leadership and ownership mindset, recognized among **Top 8 out of 400 competing teams** at the Smart India Hackathon (SIH).

TECHNICAL SKILLS

Programming Languages:	Python, Java, Kotlin, JavaScript/TypeScript, SQL (Oracle Certified), C++
AI & Intelligent Automation:	Multi-LLM Orchestration, Speculative Parallel Inference, Google Gemini API, Prompt Engineering, Stockfish AI
Cloud & Web Engineering:	AWS S3 SDK, Supabase (PostgreSQL), Firebase (Firestore, FCM, Auth), Node.js, Express, Next.js, REST APIs, Socket.io
Data & Systems:	PostgreSQL, MongoDB (Mongoose), Room/SQLite, Data Deduplication Engines, Stream Processing, SHA-256 Hashing
CS Core & Methodologies:	Data Structures & Algorithms (DSA), OOP, DBMS, OS Basics, Clean Architecture, SDLC, Agile/Scrum, Git/GitHub, Postman

FEATURED PROJECTS

ThreatLens — AI-Powered Threat Scanner & Security Intelligence — **Team Lead & Full-Stack Architect**
Tech: Java/Kotlin, Google Gemini AI, 12+ REST APIs, Firebase, Render, Python Heuristics — *github.com/Satya0810/ThreatLens*

- Spearheaded a 3-engineer hackathon team building an AI-powered QR threat scanner with multi-signal destination analysis and recursive redirect unrolling (up to 10 hops).
- Integrated 12+ cybersecurity threat APIs (VirusTotal, URLhaus, AbuseIPDB, URLScan.io) and Google Gemini AI for automated real-time site categorization.
- Implemented on-device algorithmic heuristics detecting homograph spoofing, typosquatting, and credential phishing with a zero-trust sandbox browser.
- Deployed resilient cloud microservices on Render and Firebase with real-time community threat sync and HMAC-SHA256 certificate validation.

Loanzo — AI-Driven P2P Microfinance Protocol & Multi-LLM Engine — **Lead Architect & Developer**
Tech: Kotlin, Python, Coroutines/Channels, Room v12 (SQLite), Firebase, Telegram Bot API — *github.com/Satya0810/Loanzo*

- Architected **MultiAiRaceEngine** executing speculative parallel queries across 3 LLM providers (SambaNova, Cloudflare AI, LLM7) with channel-based winner selection and deterministic offline fallback.
- Designed an ACID-compliant offline-first relational database across 13 Room entities, secured via AES-256 Android KeyStore encryption and biometric gating.
- Automated loan bidding, dispute resolution, and status alerts by engineering an asynchronous Telegram Bot (@Loanzo_bot) and FCM push pipeline.
- Built an automated Python data pipeline using ReportLab for dynamic generation of legal promissory notes (NI Act 1881) with cryptographic hash audit stamps.

Cloud Data Deduplication & CloudVault Platform — **Cloud & Data Systems Project**
Tech: Node.js, Express, AWS S3 SDK, Supabase (PostgreSQL), Stream API, SHA-256 — *github.com/Satya0810/codsoft_tasks*

- Engineered a cloud data deduplication engine achieving up to 60% storage efficiency using deterministic canonicalization and SHA-256 cryptographic hashing.
- Developed high-throughput streaming pipelines parsing multi-megabyte CSV and JSON datasets into Supabase PostgreSQL cloud database with zero memory leaks.
- Integrated AWS S3 SDK (@aws-sdk/client-s3) with time-expiring pre-signed download URLs (1h, 24h, 7d), passcode protection, and automated MIME verification.

Shatranj (ChessMaster) — Real-Time Web Platform & Stockfish AI Engine — **Full-Stack Developer**
Tech: Next.js 16 (App Router), React 19, Node.js, Socket.io, MongoDB, Stockfish.js — *github.com/Satya0810/Shatranj*

- Built full-stack platform featuring real-time multiplayer gameplay with WebSockets (Socket.io) and deep move evaluation powered by Stockfish AI engine.
- Engineered secure authentication with JWT, bcryptjs password hashing, Google OAuth, and Nodemailer transactional verification.
- Designed high-performance MongoDB (Mongoose) schemas for user statistics, game history persistence, and interactive tactical chess puzzle progression.

EDUCATION

B.Tech in Computer Science & Engineering	*Galgotias University, Greater Noida, UP*	**2024 – 2027 (Expected) | CGPA: 7.84 / 10**
Senior Secondary (Class XII) — CBSE	*Keshav Saraswati Vidya Mandir, Patna*	**2023 | 87.4%**
Secondary School (Class X) — CBSE	*Keshav Saraswati Vidya Mandir, Patna*	**2021 | 79.0%**

ACHIEVEMENTS & CERTIFICATIONS

- **Smart India Hackathon (SIH) 2026:** Ranked **Top 8 among 400 competing teams** in internal hackathon at Galgotias University.
- **QuantCraft Hackathon 2026:** Ranked **11th place** in university-wide hackathon organized via Unstop.
- **Competitive Coding:** Solved **200+ DSA problems** on LeetCode; earned **200+ GitHub contributions** across open-source and personal repositories.
- **Professional Certifications: Java Backend Development** (GUVI / HCL) | **Database Management & SQL Certification** (Oracle).
